

Flatbed trolleys

Flatbed trolleys are manufactured from either stainless steel or acid-resistant steel, depending on the intended use.

Standard trolleys are available in various sizes with two or three shelves, with or without a handle.

The trolleys are delivered fully assembled and ready for use. They feature a sturdy and durable welded frame made of round tubing. All structures are designed to eliminate sharp and cutting edges and to ensure easy cleaning of surfaces. We use maintenance-free Manner Tango 125 mm wheels as standard, with 2 out of 4 wheels being lockable.

For the two-shelf trolley, manual or electric height adjustment is available as an option.

Flatbed trolleys can also be manufactured for cleanroom environments with an electropolished finish, with height adjustment and perforated shelves available as additional features.
