

Shelf trolleys

The shelf trolleys are made from either stainless steel or acid-resistant steel, depending on their intended use.

Standard trolleys are available with either fixed or height-adjustable shelves. The number of shelves is always customized according to the customer's needs.

The trolleys are delivered fully assembled and ready for use. They feature a sturdy and durable welded frame made from square tubing. All structures are designed to eliminate sharp and cutting edges and ensure easy cleaning of surfaces. As standard, we use maintenance-free Manner Tango 125 mm wheels, with 2 out of 4 being lockable.
