

Wall cabinets 5080

Floor cabinets 5090

Wall cabinets are manufactured from stainless steel according to the client's measurements. Standard dimensions commonly used are provided in the technical specifications. The shelves are adjustable in height at 50 mm intervals, and additional shelves can be ordered if needed. Stainless steel shelf options include flat shelves and perforated shelves.

The cabinet doors have a double-layer structure and can be fitted with either a standard or master key lock. We also supply cabinets compatible with iLOQ and equipped with a lock bolt.

Depending on the space, cabinets can be manufactured with a slanted roof and internal wall cladding. For cleanroom environments, we recommend cabinets with a fully double-walled structure and rounded corners, making them easy to clean and disinfect by wiping.
