

Hand wash basins

The hand basins for gowning rooms are made of stainless steel. The wall-mounted hand basin can be chosen either open from below or with an enclosure covering the odour trap and inlet water. The hand basin has a mixer tap hole in the basin surface.

The hand basin is a practical choice for small spaces when a counter top is not needed. We manufacture the hand basin as a single-basin or multi-basin module. The 7155 hand basin with cover plate has a fixed splash plate.
